

1 a) What addition is shown?

$$\square + \square = \square$$

b) What addition is shown?

$$\square + \square = \square$$

What is the same about part a) and part b)?
What is different?

2 a) Write six different number bonds to 10

$\square + \square = 10$	$\square + \square = 10$
$\square + \square = 10$	$\square + \square = 10$
$\square + \square = 10$	$\square + \square = 10$

b) Write six different number bonds to 100

Use your answer to part a) and related facts to help you.

$\square + \square = 100$
$\square + \square = 100$
$\square + \square = 100$
$\square + \square = 100$
$\square + \square = 100$
$\square + \square = 100$

3 Fill in the missing numbers.

a) $3 + 7 = \boxed{}$

$30 + 70 = \boxed{}$

$3__ + 7__ = 100$

$100 = __0 + 3__$

b) $8 + 2 = \boxed{}$

$80 + 20 = \boxed{}$

$8__ + 2__ = 100$

$100 = __0 + 8__$

c) $5 + 5 = \boxed{}$

$50 + 50 = \boxed{}$

$5__ + 5__ = 100$

$100 = __0 + 5__$

d) $10 + 0 = \boxed{}$

$100 + 0 = \boxed{}$

$10__ + \boxed{} = 100$

$100 = \boxed{} + 10__$

4 Fill in the missing numbers.

$100 = 100 - 0$

$90 = 100 - 10$

$80 = 100 - \boxed{}$

$\boxed{} = 100 - \boxed{}$

$\boxed{} = \boxed{} - \boxed{}$

$\boxed{} = \boxed{} - \boxed{}$

Can you continue this pattern?

Talk to a partner.

Write a similar pattern starting with $50 = 50 - 0$

_____	_____
_____	_____
_____	_____

How many patterns can you find that start with different numbers?
