

Animal Adaptations

Use the annotated pictures showing animal adaptations to explain how they help the animals survive in their natural environment.

Don't simply list the adaptations; try to explain each one in full sentences. You could group adaptations that help in the same way. For example, all of the adaptations that help keep an animal warm could be mentioned together to avoid repetition.

How do camels' adaptations help them survive in the desert?

How do snow leopards' adaptations help them survive in the mountains?

How do spider monkeys' adaptations help them survive in the rainforest?

How do polar bears' adaptations help them survive in polar regions?
