

Activity sheet 25:

Researching new farming methods

Name _____

Your task is to investigate one of the newer farming methods in current use. You need to research your chosen method and make a presentation to the rest of the class.

Ideas to help you get started:

- Decide who you are working with
- Decide on your method of presentation
- Decide how you will find out the information (you will need to use the internet and books)
- If you watch any video clips for information about your topic, make a note of the URLs or bookmark them so you can find them again. You might decide to include part of a clip in your presentation.

Make sure that in your presentation you have:

- explained how your particular type of farming method works
- identified the advantages
- identified the disadvantages (for example, what about costs? Is it a method which spoils the landscape?)
- covered the role of technology in developing this method
- explained if it can be used now or if it is an idea for the future.

You could present your research as a PowerPoint presentation, on paper or even provide an activity for everyone to do! The choice is yours!
